GITHUB| LINKEDIN| PORTFOLIO

EDUCATION

City University of New York, College of Staten Island
Bachelor of Science in Computer Science Expected December 2026
Relevant Coursework:
C++ Programming, Data Structures, Operating Systems, Object Oriented Software Design, Networking & Security, Cybersecurity Fundamentals, Analysis of Algorithms, Applied Cryptography, Game Development, Web Development

SKILLS

Programming/Scripting: Python (automation), C++, Java, SQL, PowerShell
Networking: TCP/IP, DNS, HTTP/HTTPS, Network Protocols, Subnetting
Operating Systems: Linux (Kali, Ubuntu), Windows
Security Concepts: SIEM, Threat Detection, Incident Response, Vulnerability Assessment, Risk Management, Access Control
Security Tools: Splunk (SIEM), Wireshark, Nmap, Burp Suite, Metasploit, Kali Linux
Technologies: Git/GitHub, VMware, VirtualBox, Kace, Office 365

WORK EXPERIENCE

Office of Information Technology, College of Staten Island
Staten Island, NY
Help Desk Analyst August 2024 – December 2024

- Provided technical support to students, faculty, and staff, troubleshooting and resolving IT issues related to hardware, software, and network connectivity.
- Managed ticketing systems to track and resolve incidents, ensuring timely and effective customer service.
- Educated users on IT security best practices, including password management, phishing prevention, and safe computing techniques, contributing to improved organizational security awareness.

TECHNICAL PROJECTS

Vulnerability Enumeration & Exploitation Lab November 2024

Built an isolated penetration testing lab using Kali Linux and Metasploitable 2 in VMware
Performed network reconnaissance with Nmap to identify exposed services
Exploited PHP CGI argument injection (CWE-552) via Metasploit to gain remote access

Credential Abuse Detection (Password Spraying) January 2026
Python · Security Log Analysis · Detection Engineering

Built a Python-based system to detect password spraying by correlating failed logins across multiple accounts within a time window
Analyzed authentication logs in Splunk to validate attack patterns
Developed threshold-based alerts using IP, username count, and failure rate to generate SOC-style alerts and reduce false positives

CYBERSECURITY COMPETITION

Capture-the-Flag Competitor – SANS Institute AWS Skills to Jobs CTF March 2026
Achievement: Top 20 (Regional) / Top 300 Overall | Awarded 6-month SANS Skills Quest access
Tools: Kali Linux, Burp Suite, Chrome DevTools, dirsearch, HTTP/REST APIs, JavaScript, JSON, John the Ripper

Competed in multi-discipline cybersecurity CTF; solved challenges in web sec., investigation, and data analysis
Intercepted/modified HTTP reqs via Burp Suite; analyzed auth flows, cookies, APIs, and client/server-side logic
Performed endpoint/dir enumeration in Kali Linux; extracted sensitive data from JSON/encoded responses
