GITHUB| LINKEDIN| PORTFOLIO

Objective

I am a motivated Computer Science student with a strong interest in cybersecurity and ethical hacking seeking an internship or entry level position to develop practical security skills and contribute to protecting computer systems and networks.

SKILLS

Programming/Scripting: C++, Python, HTML, CSS, Java, SQL, Powershell
Technologies: Git/GitHub, Kace, Adobe Acrobat, Office 365, Google Suite, Splunk (SIEM), Vmware, VirtualBox, Wireshark, Nmap, Burpsuite, Kali Linux, Metasploit
Certifications, Mastercard-Cybersecurity Job Simulation , 2024

WORK EXPERIENCE

Office of Information Technology, College of Staten Island
Staten Island, NY
Help Desk Analyst August 2024 – December 2024

- Provided technical support to students, faculty, and staff, troubleshooting and resolving IT issues related to hardware, software, and network connectivity.
- Managed ticketing systems to track and resolve incidents, ensuring timely and effective customer service.
- Educated users on IT security best practices, including password management, phishing prevention, and safe computing techniques, contributing to improved organizational security awareness.

PROJECTS

Murder Mystery Game June 2024

- Collaborated in a team of three to design and develop a murder mystery game using Unity and Visual Studio, with C# as the primary programming language.
- Developed gameplay mechanics involving clues and deduction to identify the antagonist, creating an immersive and challenging experience.
- Strengthened proficiency in C#, Unity, and game design principles while refining debugging and problem-solving skills.

Vulnerability Enumeration & Exploitation Lab November 2024

- Built an isolated penetration testing lab using Kali Linux and Metasploitable 2 in VMware
- Performed network reconnaissance with Nmap to identify exposed services
- Exploited PHP CGI argument injection (CWE-552) via Metasploit to gain remote access

Credential Abuse Detection (Password Spraying) January 2026
Python · Security Log Analysis · Detection Engineering

- Designed and implemented a detection system using python to identify password spraying attacks by correlating failed authentication attempts across multiple user accounts within a sliding time window.
- Generated realistic authentication telemetry and simulated credential abuse scenarios to validate detection accuracy and reduce false positives.
- Implemented threshold-based alerting using source IP, distinct usernames, failure count, and time correlation, producing SOC style security alerts.

Capture-the-Flag Competitor – SANS Institute AWS Skills to Jobs CTF March 2026
Achievement: Top 20 (Regional) / Top 300 Overall | Awarded 6-month SANS Skills Quest access
Tools: Kali Linux, Burp Suite, Chrome DevTools, dirsearch, HTTP/REST APIs, JavaScript, JSON, John the Ripper

- Competed in a multi-discipline cybersecurity CTF, solving challenges across web application security, investigation, and data analysis.
- Intercepted and modified HTTP requests using Burp Suite, analyzing authentication flows, cookies, and API communications.

- Examined client-side JavaScript and backend API endpoints using developer tools to identify hidden functionality and exposed data.
- Performed endpoint and directory enumeration in Kali Linux, analyzing JSON responses and encoded data to uncover sensitive information and retrieve challenge flags.

EDUCATION

City University of New York, College of Staten Island

Associates of Science in Computer Science January 2025

Bachelor of Science in Computer Science Expected December 2026

Relevant Coursework:

Discrete Math, C++ Programming, Data Structures, Operating Systems, Object Oriented Software Design, Networking & Security, Cybersecurity Fundementals, Analysis of Algorithms, Applied Cryptography, Game Development, Web Development
