EDUCATION

City University of New York, College of Staten Island
Bachelor of Science in Computer Science Expected December 2026

Relevant Coursework:
Discrete Math, C++ Programming, Data Structures, Operating Systems, Object Oriented Software Design, Networking & Security, Cybersecurity Fundementals, Analysis of Algorithms, Applied Cryptography, Game Development, Web Development

SKILLS

Programming/Scripting: C++, Python, HTML, CSS, Java, SQL, Powershell
Technologies: Git/GitHub, Kace, Adobe Acrobat, Office 365, Google Suite, Splunk (SIEM), Vmware, VirtualBox, Wireshark, Nmap
Certifications, Mastercard-Cybersecurity Job Simulation , 2024

WORK EXPERIENCE

Office of Information Technology, College of Staten Island
Staten Island, NY
Help Desk Analyst August 2024 – December 2024

- Provided technical support to students, faculty, and staff, troubleshooting and resolving IT issues related to hardware, software, and network connectivity.
- Managed ticketing systems to track and resolve incidents, ensuring timely and effective customer service.
- Educated users on IT security best practices, including password management, phishing prevention, and safe computing techniques, contributing to improved organizational security awareness.
- Collaborated with senior IT staff to implement system updates, optimize workflows, and enhance the efficiency of help desk operations.

PROJECTS

Murder Mystery Game June 2024

- Collaborated in a team of three to design and develop a murder mystery game using Unity and Visual Studio, with C# as the primary programming language.
- Implemented interactive user interfaces, including menus and buttons, to enhance player engagement and usability.
- Developed gameplay mechanics involving clues and deduction to identify the antagonist, creating an immersive and challenging experience.
- Strengthened proficiency in C#, Unity, and game design principles while refining debugging and problem-solving skills.

Vulnerability Enumeration & Exploitation Lab November 2024

- Built an isolated penetration testing lab using Kali Linux and Metasploitable 2 in VMware
- Performed network reconnaissance with Nmap to identify exposed services
- Enumerated web vulnerabilities using Nikto and phpinfo.php
- Exploited PHP CGI argument injection (CWE-552) via Metasploit to gain remote access
- Conducted SSH brute-force testing and upgraded shell access to Meterpreter for post-exploitation analysis
